

Slopetame²

Limited Warranty

Preamble:

All of the materials used in making the Slopetame² product are non-biodegradable plastics, with UV light inhibiting agents added. As such they can be described as having a "limited lifespan" for those portions exposed to sunlight. From a practical standpoint, we know that plastic pipe materials have been used in the ground since 1946, and are still functioning. We expect all materials not exposed to sunlight to remain in service indefinitely, with surface materials exposed to be eventually shaded and protected by vegetation cover, or gravel fill as appropriate for each installation. The fabric backing layer will become a permanent element within the vegetative root zone for vegetated installations.

Our plastic materials will not directly harm or help the vegetation grown within the Slopetame² structure from a horticultural standpoint. The purpose of the structure is to stabilize and contain soils upon a slope, which will allow the plant root system to develop and function properly, and minimize loss of such soils from the surface due to water erosion.

Warranty Policy:

Invisible Structures, Inc. warrants to its purchasers that all Slopetame² materials furnished by it will be free from defects in materials and/or workmanship. This warranty shall be extended for a period of three (3) years following the date of shipment by us. All defective materials shall be refurbished after inspection by our company, or representative, showing the materials have failed under this warranty and providing a written claim is presented to us within the warranty period. Under this warranty, we agree to either: refund the cost of materials; or furnish the defective materials at no charge, excluding re-installation costs. This in lieu of all other warranties expressed or implied and is the sole warranty extended by us. Our liability under this warranty is limited to the refurbishing of materials and does not include any responsibility for consequential or other damages of any nature.
